DETAILED ACTION

Claim Objections

Claims 13, 3 and 7-10 are objected to because of the following informalities:
New claim 13 recites "a first port facing outward at an exterior edge of the system board". This language does not appear to clearly define the invention since the first facing port does not face the exterior edge of the system board. It appears that the first port is located on the exterior edge and faces outward in the same direction as the exterior edge. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13, 3 and 7-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Takase et al. (US 6,261,107).

Takase discloses a system board (2) comprising a connector (6) that includes a first port (15) facing outward in the same direction as an exterior edge (shown at 70 in Fig.1) of the system board; and a second port (surrounding 18) facing inward to an interior of the system board.

Regarding claim 3, Takase discloses the ports being substantially functionally identical.

Regarding claim 7, Takase discloses a peripheral device (5) operationally connected to the inward facing port.

Regarding claims 8-10, Takase discloses the system board being part of a portable computer (col.8 line 57).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Takase.

Takase discloses substantially the claimed invention except for the specific connector type. However, it would have been obvious to one having ordinary skill in the art at the time of the invention to elect a specific connector type, such as a USB connector base on environmental requirements/preferences, in order to provide a space efficient assembly.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hashimoto et al. (US 6,338,631) and Chen et al. (US 2001/0041030) disclose similar system boards.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
